*"Looking at my Before and After pictures, I was stunned – there was a major change!"*

*"After the Ultherapy treatment, my skin looked firmer...it felt tighter. The sagging I had noticed before was eliminated."*

*"There's no more 'hooding,' and it really opened up my eyes. I can now wear eye shadow."*

*"After Ultherapy, my skin has gradually shifted back closer to where it used to be and I didn't have to go under the knife."*

*"I like that the result is gradual over a 90-day period so it's not obvious to others; I just begin to look more rested."*

*"I like looking better...without looking 'done.'"*

*"There was some pain during the treatment, but it was worth the results I continue to see each day!"*

# Ultherapy: Ultra. Sound. Skin.

## What is Ultherapy?

Our faces can tell many stories, and while wrinkles might say 'experience,' droopiness can say 'tired!' Surgery has always been an option, but now there's Ultherapy, a non-surgical ultrasound treatment for counteracting the effects of time and gravity on your skin. The beauty of this 30-60 minute face and neck treatment is that it uses the body's own regenerative response to gently and gradually restore memory to the skin and underlying tissue support.

*"There was no down time and the results are very natural...Nobody knows I had anything done. They just know I look better."*

Ultherapy Patient

## How does the Ultherapy procedure work?

As with other ultrasound procedures, a smooth applicator placed upon your skin projects an image onto a screen that allows your practitioner to plan where the energy will be directed. This same applicator is then used to deliver low levels of focused heat to just the right depth below the skin to achieve a positive effect, all the while leaving the surface of your skin undisturbed.

Your skin's response to the energy is to stimulate the growth of new collagen. A gradual tightening and firming occurs, resulting in a natural lift of the skin over time.

## How is this procedure different than other cosmetic procedures?

Ultherapy is the only non-surgical skin rejuvenation procedure that uses ultrasound to see below the surface of the skin and to specifically target the deep foundational layer of tissue that doctors address in surgery. The ability to treat not just the skin but its underlying support very precisely, from the inside out, helps to ensure both safe and satisfying results, with no downtime.

## What does it feel like?

There can be some discomfort while the energy is being delivered, but it is temporary, and a signal that the collagen-building process has been initiated. Comfort thresholds vary from patient to patient, and practitioners will discuss options for making the experience as pleasant as possible. Patients typically leave comfortable and excited about the benefits to come.

## What can I expect afterwards?

You are able to return to your normal activities right away, and there are no special measures you need to take. Your skin may appear a bit flushed immediately after the treatment, but any redness should disappear within a few hours. It is not uncommon to experience slight swelling for a few days following the procedure or tingling/tenderness to the touch for a few weeks following the procedure, but these are mild and temporary in nature. There is the possibility of other less common post-procedural effects, such as temporary small areas of bruising or numbness, which your physician will review with you.

## Is Ultherapy safe?

Ultrasound energy has a proven track record, with over 50 years of use in the field of medicine, and clinical trials have demonstrated the safety of this latest application.

## What kind of results can I expect?

With just one treatment, the regenerative process is initiated, but the full effect will build gradually over the course of two to three months. Some patients may benefit from more than one treatment.

*Visible* effects include a lifting and toning of sagging skin. In the FDA clinical trial for instance, nine out of ten patients had a noticeable, significant lift of the brow line. This resulted in reduced skin laxity on the eyelid and a more open, youthful look to the eyes overall. Patients reported firmer, better-fitting skin in other areas of the face and neck as well. There is also an *invisible* result from the procedure with the creation of new collagen, which can help to slow down the rate of skin aging.

## Who is a good candidate for Ultherapy?

A good candidate for Ultherapy is someone with skin that has "relaxed" to the point of looking, and often feeling, less firm. A lowered brow line or sagging skin on the eyelids, for instance, is often the first sign of "maturing" skin. While it does not duplicate the results of surgery, Ultherapy has proven to be an inviting alternative for those who are not ready for surgery.

*Ask your  
doctor if  
Ultherapy  
is right  
for you.*
